FU9099

USB cable for Privest

Using the USB programming cable and the software included in the delivery kit, you can program your ABUS Privest wireless alarm system. Simply connect the cable and the adapter to a free USB port on your laptop or PC and quickly access your ABUS wireless alarm system via the user–friendly software. From the software interface, you can read the alarm system's event memory and save your settings to your computer or print them
out.

Product highlights:

- Programming the complete wireless alarm system with all parameters
- All system settings quickly and easy to use
- Easy connection to PC or notebook computer via USB
- Software also available for download
- Fast event memory readout
